WHAT DOES IT TAKE TO MAKE IT A HUGLU?

Of course our traditions. We are open for innovations and improvement, on the other hand, we always have respect for experience based on craftsmanship.

Our vision of accident free shot ensures that our priority is safety. Safety is a big promise. We subject all our shotguns made of first class steel to safety tests in order to keep our promise. We have great targets; however, we are aware of the fact that achieving these targets require paying attention to minor details.

OVER & UNDER

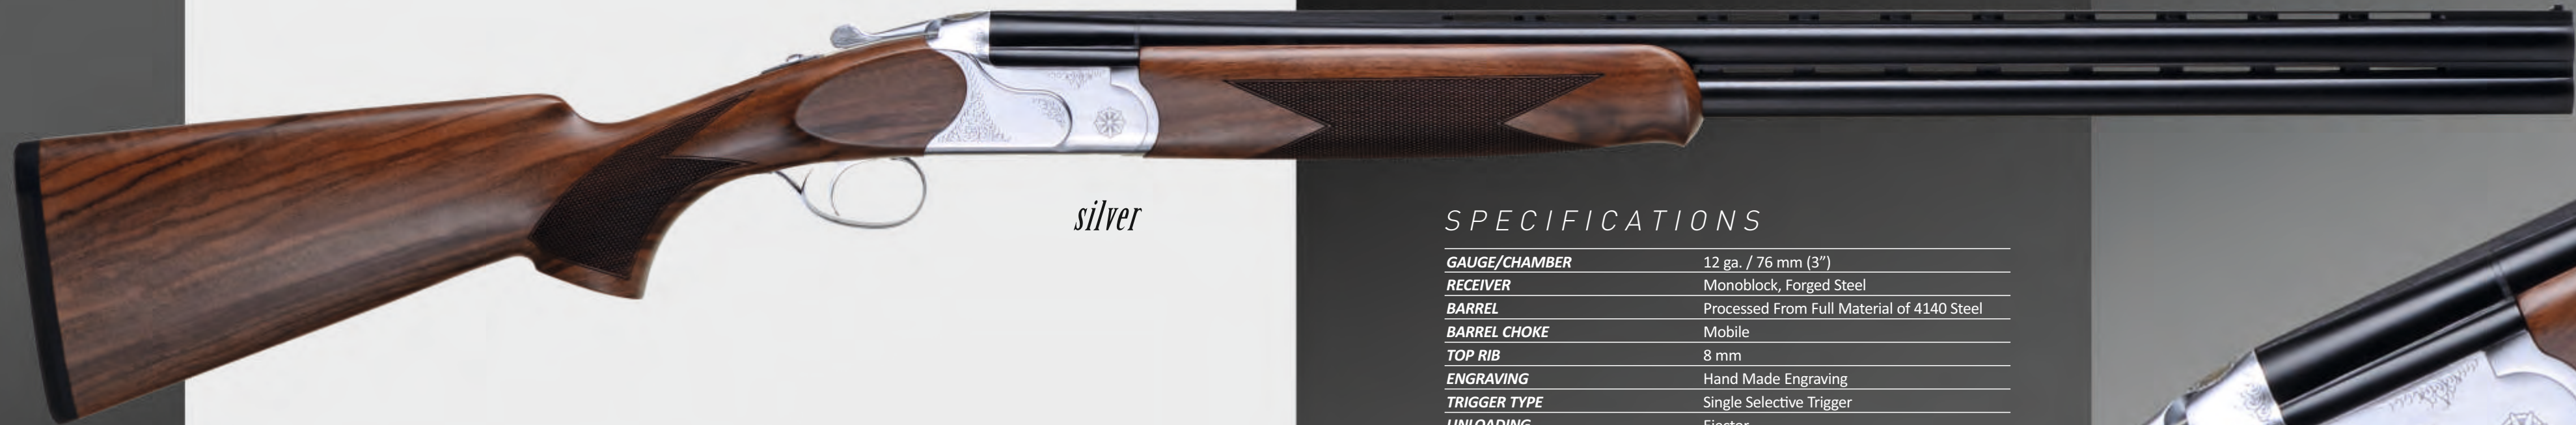

A heritage, from the father to the son...

Huglu has become a well-known brand around the world, regarding its over-under shotguns. These designs combine the steel and the wood with a mastery and craftsmanship inherited through a duration of one century. Our master craftsmen and engineers work intensively to make each one of our over-under shotguns perfect to its every detail. As a result of these works we are able to achieve perfect frame vs barrel fit.

World famous Turkish walnuts and Italian steel, combined with experience and mastery, altogether make our over-under shotguns become precious heritage items to keep for following generations.

SIDE BY SIDE

**We are destined to
achieve extremely
difficult objectives...**

What would you expect from a premium shotgun? Safety, design and perfect shooting. Experienced hunters know Huglu side by side shotguns very well. Because our side by side shotguns never disappoint you. Even during dangerous hunting sessions you will be sure that it is ready and safe at each shot. At the roughest hunting terrains; its sturdy frame as well as the forearm and stock which are made of first class Turkish walnut will endure any harsh conditions. We know very well that manufacturing side by side shotguns require utmost expertise and craftsmanship.

SINGLE BARREL

**Legends do not perish:
they are re-interpreted.**

Everyone saw this shotgun at a distant village in rurals or in a nostalgic movie. Almost every shotgun you have seen in these cases; had a Huglu sign under it. Single barrels have a particular significance for us. History of Huglu is full of single barrel shotguns. Strength and quality of our single barrel shotguns have a great share in our becoming a world wide recognized brand. Knowing and respecting this fact, we sustain our best efforts in producing the best single barrel shotguns of our country.

SEMI AUTOMATIC

Ergonomic designs which are meant for perfect shooting experience.

For efficient grouping, sturdy and lightweight frame is accompanied by a barrel which is made of Italian steel. All these components come together in Huglu's semi automatic shotguns. Our experience of one century is presented for your enjoyment through semi automatic product range of ours.

V E Y R O N

“Hammer Locking System” (patent pending) developed by Huglu eliminates a big trouble that the shooters who like to make fast and serial shootings might encounter. If your fingers are faster than even your shotgun and so you pull the trigger before the breech bolt goes into the battery, Hammer Locking System prevents the hammer to drop and then you don't miss the next fire.

DROP ADJUSTING SHIMS

You can now customize your gun just like many things that add value to your life. Shims allowing for adjusting the stock to your measurements in right-left-up-down directions will integrate you with your shotgun.

TRIGGER PULL

Only 2,3 kg trigger pull weight will provide a big advantage to keep you onto your target while pulling the trigger.

We are aware that the secret behind a comfortable shot for the gun owner lies with recoil intensity. Our engineers have developed a recoil pad consisting of special components so the recoil intensity is felt minimally. This pad not only absorbs the recoil intensity, but also makes shotgun shouldering easier. Also with 3 different sizes butt pads in total, you will have a chance to change your length of pull on the gun.

ALUMINUM TRIGGER GUARD

We paid utmost attention to manufacture each detail of Veyron from finest components. Trigger guard which constitutes the frame of the trigger group is entirely made of aluminum with machining just like all other semi-automatic models, and thus, we've minimized deformations which may occur for years to come, and thereby extended the service life of your gun.

Conic section after the chamber is extended in this improved barrel, and thus, both muzzle jump and felt recoil are reduced. In addition to Ex-Bore barrel, this feature offered by Veyron ensures more stable shots in hunts without tiring.

You will be capable of hunting at longer distances and shooting with better pattern thanks to 18,75 barrel bore diameter. Already proven in Renova model, this barrel easily keeps Veyron ahead of the game.

Due to new improved gas piston system, Veyron mechanism cycles much more faster and needs less cleaning compared with a regular gas operated semi auto shotgun. Thus, while Veyron minimize the cleaning requirement that is the most unfavorable side on a gas operated shotgun, it gives shooters an opportunity to enjoy a mechanism cycling too fast.

7 cm long mobile chokes increase your pattern efficiency and offers significant advantages in your hunts. And one additional extended MOD knurled choke comes with Veyron will give an extra advantage during your shootings.

RENOVA

**HAMMER
LOCKING
SYSTEM**

“Hammer Locking System” (patent pending) developed by Huglu eliminates a big trouble that the shooters who like to make fast and serial shootings might encounter. If your fingers are faster than even your shotgun and so you pull the trigger before the breech bolt goes into the battery, Hammer Locking System prevents the hammer to drop and then you don't miss the next fire.

DROP ADJUSTING SHIMS

You can now customize your gun just like many things that add value to your life. Shims allowing for adjusting the stock to your measurements in right-left-up-down directions will integrate you with your shotgun.

TRIGGER PULL

Only 2,3 kg trigger pull weight will provide a big advantage to keep you onto your target while pulling the trigger.

**IKK SOFT
IMPACT**

We are aware that the secret behind a comfortable shot for the gun owner lies with recoil intensity. Our engineers have developed a recoil pad consisting of special components so the recoil intensity is felt minimally. This pad not only absorbs the recoil intensity, but also makes shotgun shouldering easier. Also with 3 different sizes butt pads in total, you will have a chance to change your length of pull on the gun.

INERTIA SYSTEM

Thanks to improved and reinforced Inertia System mechanism, Renova offers enjoyable shots with its mechanism that ensures maximum performance with low and high loads.

SLIGHT FORCE

Conic section after the chamber is extended in this improved barrel, and thus, both muzzle jump and felt recoil are reduced. In addition to Ex-Bore barrel, this feature offered by Renova ensures more stable shots in hunts without tiring.

EX BORE

You will be capable of hunting at longer distances and shooting with better pattern thanks to 18,75 barrel bore diameter. This barrel easily keeps Renova ahead of the game.

ACTIVE CHOKE

7 cm long mobile chokes increase your pattern efficiency and offers significant advantages in your hunts.

ALUMINUM TRIGGER GUARD

We paid utmost attention to manufacture each detail of Renova from finest components. Trigger guard which constitutes the frame of the trigger group is entirely made of aluminum with machining just like all other semi-automatic models, and thus, we've minimized deformations which may occur for years to come, and thereby extended the service life of your gun.

PUMP ACTION

Ergonomic designs which are meant for perfect shooting experience.

For efficient grouping, sturdy and lightweight frame is accompanied by a barrel which is made of Italian steel. All these components come together in Huglu's semi automatic shotguns. Our experience of one century is presented for your enjoyment through semi automatic product range of ours.

ATROX

Ejection system works with a spring to eject blank cartridges even with slow pulling the pump back

Adjustable Ghost Rear Sight to customize your sighting

Picatinny Rail for mounting different shooting accessories

Heat Shield to protect shooter hands from the heat of the barrel.

Wing Protected Front Sight

Muzzle Brake

Safety is much more important than anything in a lifetime... Immobilizing system on the firing pins will make shooters feel themselves in safe during shooting

Cross-bolt safety behind trigger

Processed from 6013 aluminium for a longer usage time without any deformation.

GRIP & STOCK OPTIONS

PISTOL GRIP

FOLDING TELESCOPIC STOCK

TELESCOPIC STOCK

STANDARD STOCK

PISTOL GRIP STOCK

To make a safe shooting with a pump action shotgun, the breech bolt must lock perfectly and action bar must slot into its place faultlessly.

If you are shooting in a jungle or a muddy/dirty environment, any dust or dirt may block the mechanism to be locked or the action bar to be slotted into its place. Thus, because of the high pressure that develops when shooting, the mechanism crashes to the back of the receiver and the gun may explode while shooting. So the shooter might get seriously injured.

Immobilizer system we improved prevents the firing pin to be hit by the hammer when the gun is in the mentioned conditions above. Hence, the gun doesn't fire and the shooter doesn't get injured due to this exploding.
